ABT mManifest
Mobile Manifest App for Android™

The paperless way to dispatch, manifest and report
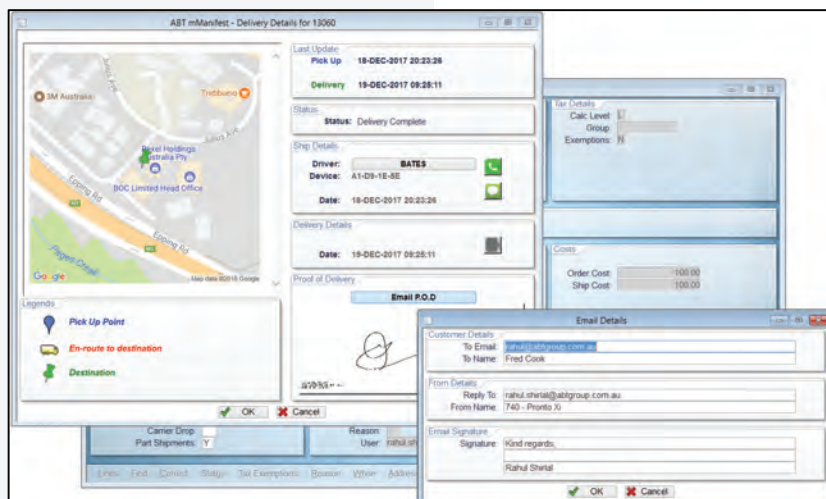

abtgroup.com.au

Keeping your deliveries managed every step of the way, just got easier.

Fully integrated with your Pronto Xi ERP, ABT mManifest helps you know the location of your business orders from door to door.

With this handy App for Android™ no matter where you are, or time of day, you can now manage and report on all of your deliveries in real-time. To increase productivity, the deliveries for the day are displayed in the drop sequence which can easily be changed by the driver using drag and drop.

The delivery ETA is calculated using Google Maps and is based on the current traffic conditions and is updated every few minutes. The ETA is synchronized with Pronto Xi system in real-time and the drivers' locations are also updated in Pronto at regular intervals, enabling the user to see the current locations of all the drivers overlayed on a map. Sign-on-glass for deliveries is supported and proof of delivery can be sent via email straight from Pronto, to simplify your working process. The email sent out also has a link to Google Maps showing the exact location where the signature was captured.
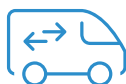

Save time on the go.

The paperless way to despatch, manifest and report

Keeping your deliveries managed, every step of the way, just got easier with mManifest! It helps you know the location of your business orders from door to door.

Google Maps routing

Fully integrated

Integrated with Pronto Xi so that you can get real time status of deliveries, including the current location of the delivery driver within Pronto Xi

Delivery time estimation

Estimated time of delivery updated based on real time traffic (using Google Maps™) throughout the delivery run and updated in Pronto Xi

Practical functions

Add general notes and action notes about the orders; delivery instructions; take pictures and attach in action notes; built in GPS for navigation

Simplify working processes

Increased efficiency, with simple processes and scan package barcodes at the time of loading the van as well as at delivery

Easy to use

Ability to re-organise/sort the manifest deliveries on the app using simple drag and drop

Communication made easy

Send and receive messages from the app to backend office personnel

Environment attributes

Capture critical environmental attributes like temperature during delivery e.g. food delivery/medical supplies
